

ACT NOW ON TERRITORIAL TAXATION FOR INDIVIDUALS

Territorial Taxation for Individuals is an *American first policy*:

- Territorial Taxation for Individuals would end the discriminatory double-taxation of overseas Americans.
- Territorial Taxation for Individuals would be tax-revenue positive since it would eliminate a loophole that exempts wealthy foreigners not resident in the United States from having to pay taxes on substantial real estate investments.
- Territorial Taxation would increase the hiring of Americans overseas as it would eliminate the 35% extra cost attached to Americans as a result of double taxation and compliance costs.
- Territorial Taxation would allow for an increase of American exports. More overseas Americans will lead to more promotion of American products, leading to more exports and more US-based jobs.
- Territorial Taxation would attract skilled immigration to the United States. The current system of taxation discourages skilled entrepreneurs from coming the US and thereby subjecting their overseas income to double taxation.
- Territorial Taxation would end the discriminatory costs of tax compliance for overseas Americans.
